Storage

Amazon S3

Store and retrieve any amount of data from anywhere

Amazon S3 is an object storage service that offers industry-leading scalability, data availability, security, and performance.

Create a bucket

Every object in S3 is stored in a bucket. To upload files and folders to S3, you'll need to create a bucket where the objects will be stored.

Create bucket

How it works

aws Introduction to Amazon S3

Copy link

aws

Pricing

With S3, there are no minimum fees. You only pay for what you use. Prices are based on the location of your S3 bucket.

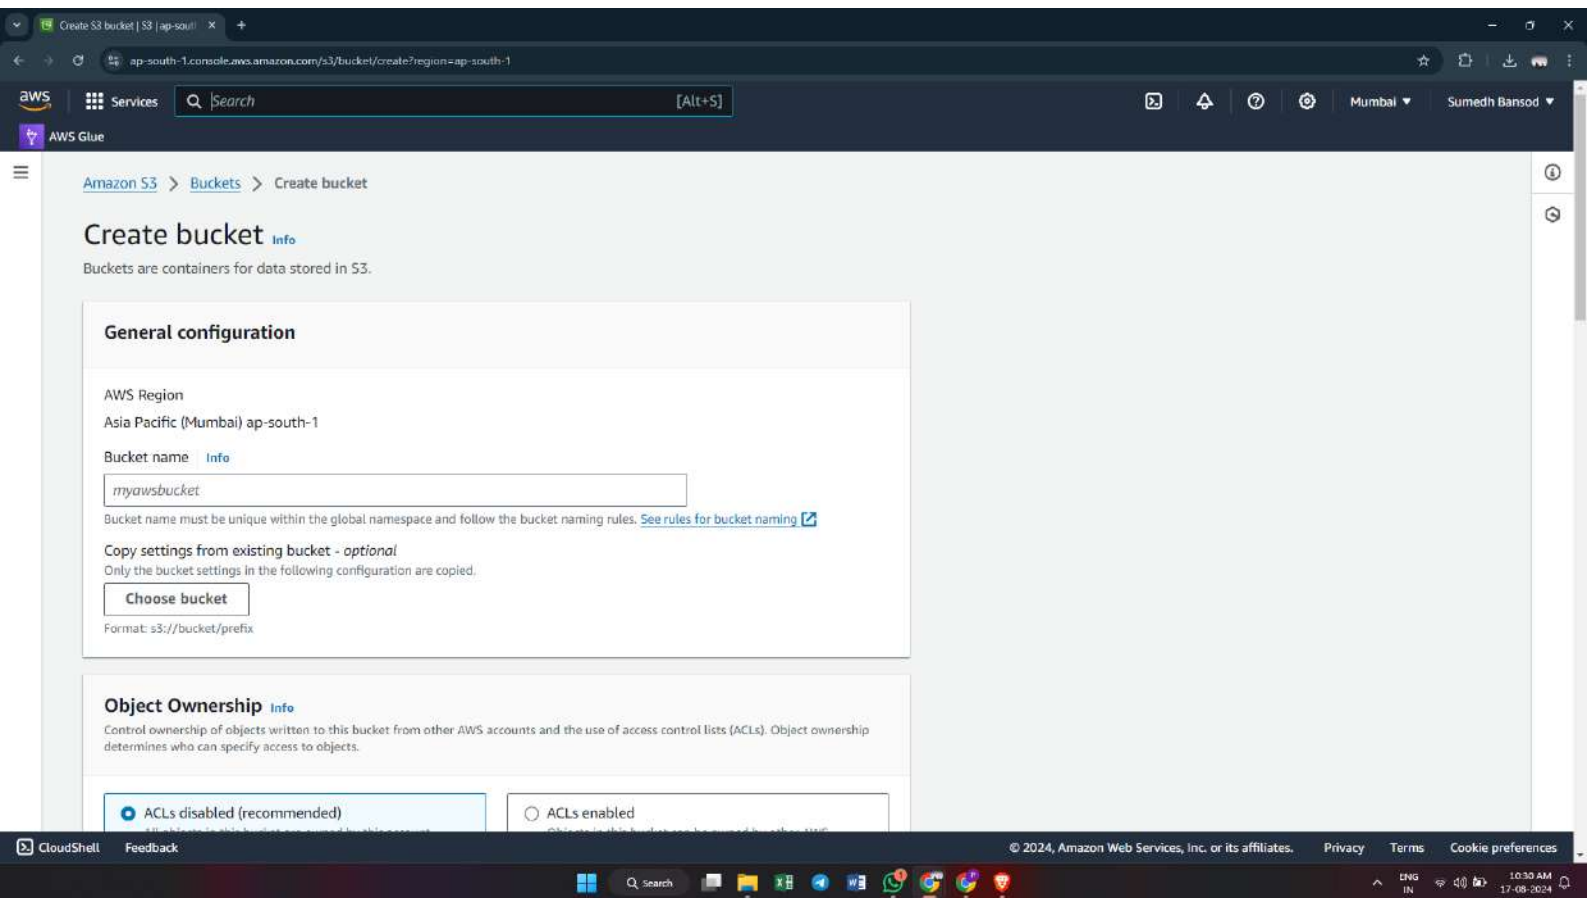

Estimate your monthly bill using the [AWS Simple Monthly Calculator](#)

The screenshot displays the AWS Glue console interface. At the top, the browser address bar shows the URL: `ap-south-1.console.aws.amazon.com/gluestudio/home?region=ap-south-1#/editor/blank/graph`. The console header includes the AWS logo, a search bar, and the user's name 'Sumesh Ranad'. The main workspace is titled 'Untitled job' and features a 'Visual' tab. The job graph consists of three nodes: two 'Data source - S3 bucket' nodes labeled 'product' and 'category', and a 'Transform - Join' node labeled 'product_category_join'. The 'product' and 'category' nodes are connected to the 'Join' node. The 'Join' node is currently selected, and its configuration panel is visible on the right. The configuration panel shows the 'Name' as 'product_category_join', 'Node parents' as 'product' and 'category', and 'Join type' as 'Inner join'. The 'Join conditions' section shows a condition: 'product.category_id = category.id'. The bottom of the console shows a 'Data preview' tab and a status bar at the very bottom indicating the date and time as '17-08-2024'.

The screenshot displays the AWS Glue console interface. On the left, a workflow diagram shows two 'Data source - S3 bucket' nodes (one for 'product' and one for 'category') feeding into a 'Transform - Join product_category_join' node, which then feeds into a 'Transform - Change Schema' node. The 'Change Schema' node is highlighted with a blue border. On the right, the 'Transform' configuration panel for the 'Change Schema' node is visible. It shows the 'Name' as 'Change Schema', 'Node parents' as 'product_category_join', and a 'Join - Transform' dropdown. Below this, the 'Change Schema (Apply mapping)' table is shown, mapping source keys to target keys and data types.

10:44 AM 17-08-2024

The screenshot displays the AWS Glue Studio interface. The main workspace shows a workflow with three nodes connected sequentially:

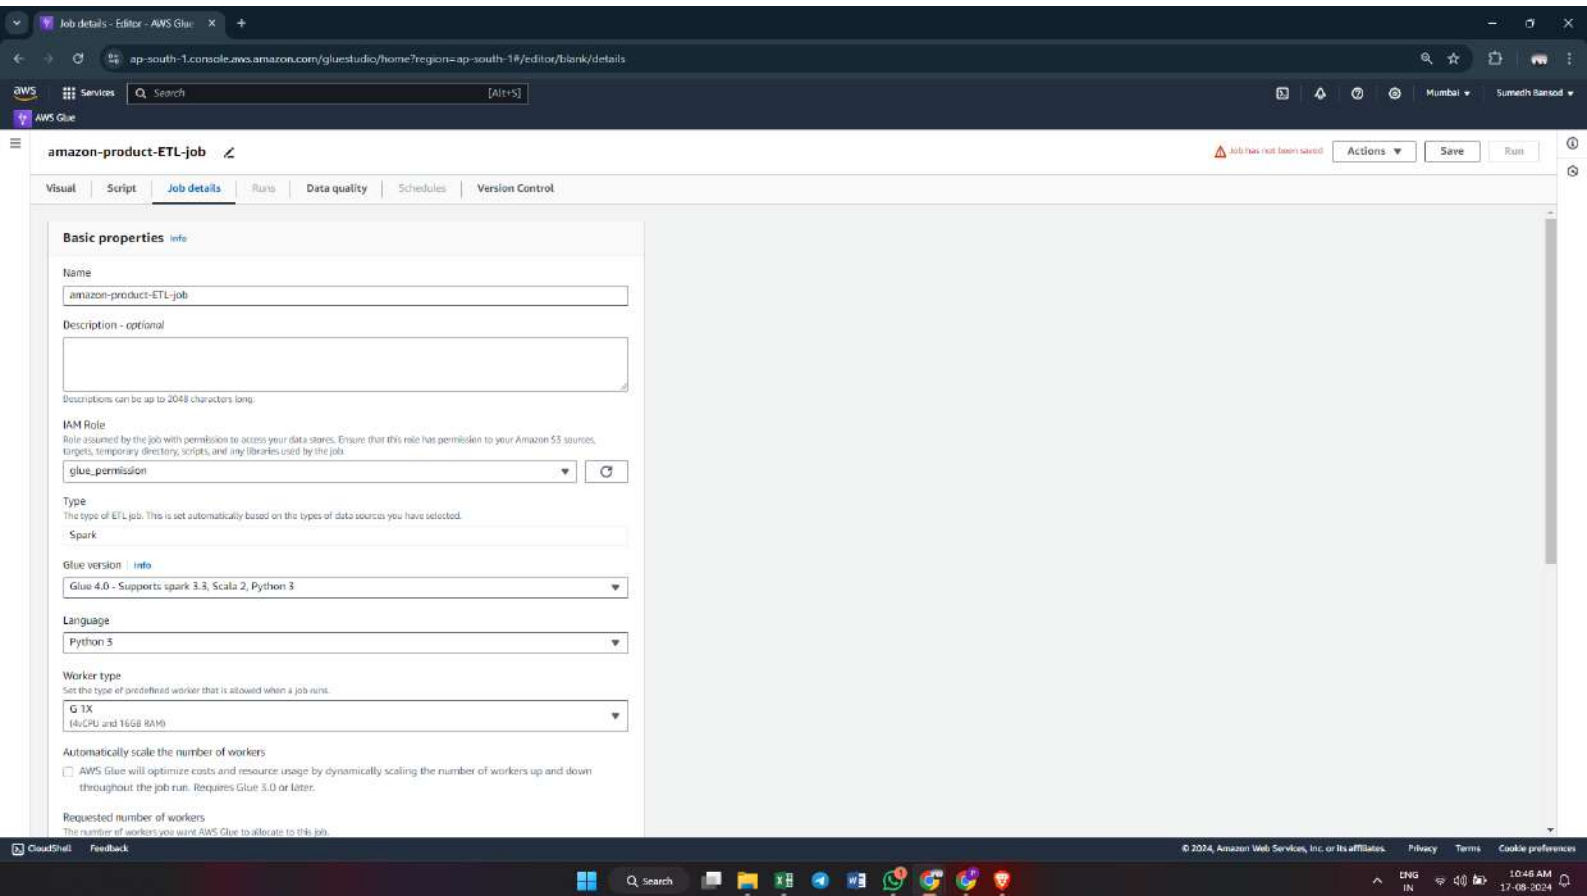

- Transform - Change Schema**: Labeled 'Change Schema'.
- Transform - Drop Fields**: Labeled 'Drop Fields'.
- Data target - S3 bucket target**: Labeled 'target'.

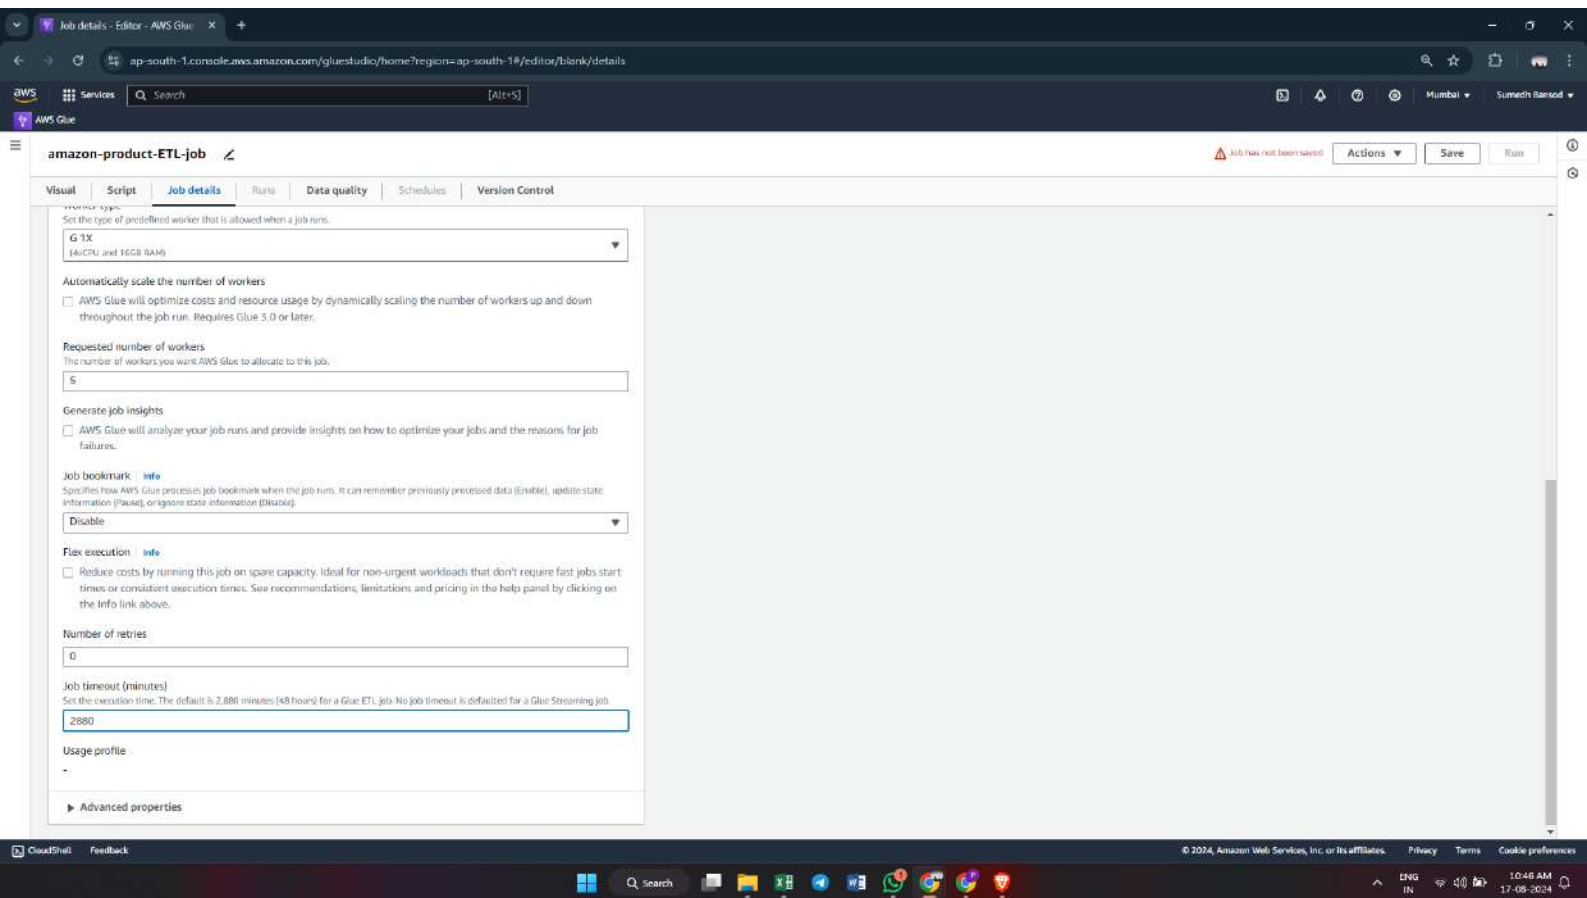

The right sidebar is open to the **Data target properties - S3** configuration panel. The settings are as follows:

- Name**: target
- Node parents**: Choose one or more parent node (Dropdown menu showing 'Drop Fields - Transform').
- Format**: Parquet (Dropdown menu with a note: 'After you save your job, it will use Glue Studio's optimized Parquet writer.')
- Compression Type**: Snappy (Dropdown menu).
- S3 Target Location**: Choose an S3 location in the format s3://bucket/prefix/object/ with a trailing slash (/). The input field contains 's3://amazon-products-bucket/warehouse/'.
- Data Catalog update options**:
 - ☒ Do not update the Data Catalog
 - ☐ Create a table in the Data Catalog and on subsequent runs, update the schema and add new partitions
 - ☐ Create a table in the Data Catalog and on subsequent runs, keep existing schema and add new partitions
- Partition keys - optional**: Add partition keys. (Add a partition key button is visible).

The bottom of the screen shows the AWS Glue logo, a search bar, and the user's name 'Suresh Barad'.

Data source configuration

Is your data already mapped to Glue tables?

☒ Not yet

Select one or more data sources to be crawled.

☐ Yes

Select existing tables from your Glue Data Catalog.

Data sources (0)

Info

Edit

Remove

Add a data source

The list of data sources to be scanned by the crawler.

Type	Data source	Parameters
You don't have any data sources.		
<div>Add a data source</div>		

Custom classifiers - optional

A classifier checks whether a given file is in a format the crawler can handle. If it is, the classifier creates a schema in the form of a StructType object that matches that data format.

Update chosen IAM role

Only IAM roles created by the AWS Glue console and have the prefix "AWSGlueServiceRole-" can be updated.

Lake Formation configuration - optional

Allow the crawler to use Lake Formation credentials for crawling the data source. [Learn more.](#)

☐ Use Lake Formation credentials for crawling S3 data source

Checking this box will allow the crawler to use Lake Formation credentials for crawling the data source. If the data source is registered in another account, you must provide the registered account ID. Otherwise, the crawler will crawl only those data sources associated to the account. Only applicable to S3, Glue Catalog, Iceberg, and Hudi data sources.

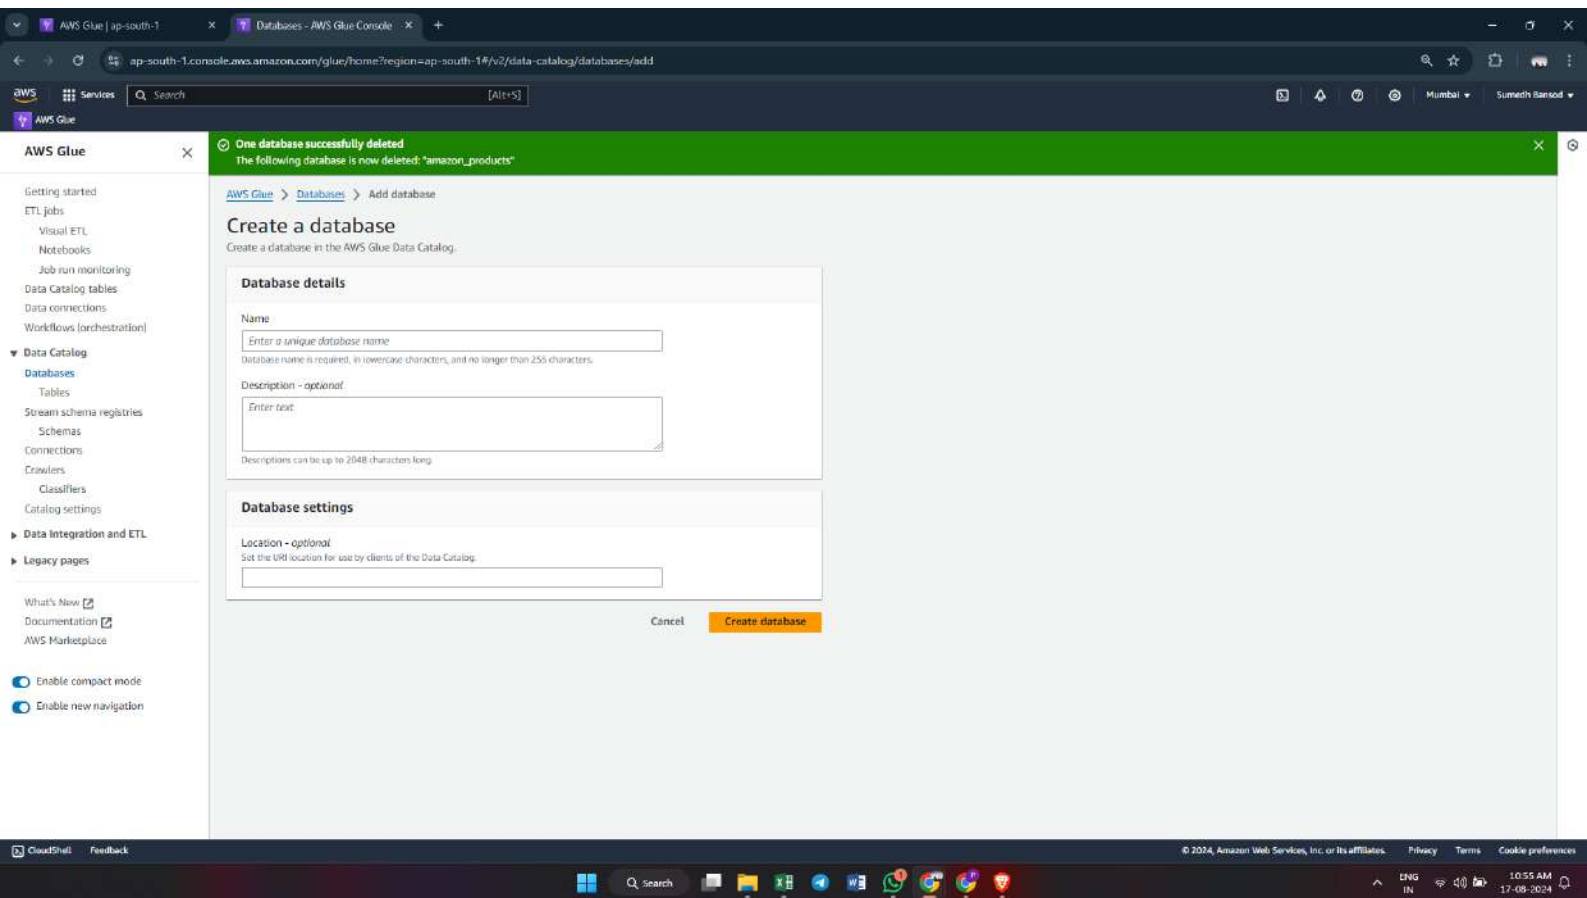

Security configuration - optional

Enable at-rest encryption with a security configuration.

Table name prefix - optional

Type a prefix added to table names

Maximum table threshold - optional

This field sets the maximum number of tables the crawler is allowed to generate. In the event that this number is surpassed, the crawl will fail with an error. If not set, the crawler will automatically generate the number of tables depending on the data schema.

Type a number greater than 0

Advanced options

Crawler schedule

You can define a time-based schedule for your crawlers and jobs in AWS Glue. The definition of these schedules uses the Unix-like cron syntax. Learn more

Analytics

Amazon Athena

Start querying data instantly.

Amazon Athena is an interactive query service that makes it easy to analyze data in Amazon S3 and other federated data sources using standard SQL.

Get started

☐ Query your data with Trino SQL

Use Query editor to analyze data on S3, on-premises, or on other clouds.

☒ Analyze your data using PySpark and Spark SQL

Use notebooks to build interactive Spark applications.

Launch notebook editor

Pricing

Region: Asia Pacific (Mumbai)

SQL queries per TB scanned	\$5.00 per TB
Apache Spark calculations	\$0.45 per DPU hour

Cost calculator

Getting started

Add the data source and identify the table and column names. Then you can begin querying your data right away.

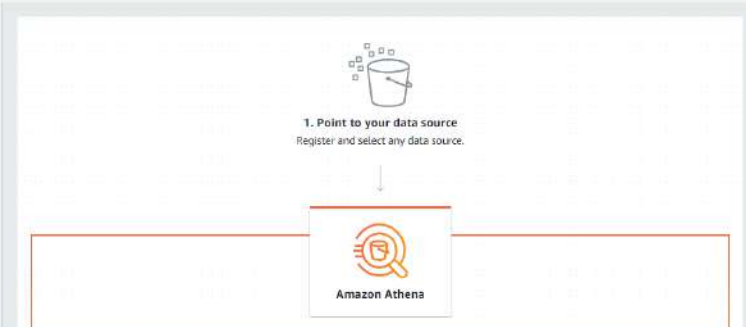

Learn more

More resources

How it works

1. Point to your data source

Register and select any data source.
